10 To secure the benefits of a low phase noise, wide tune range
SAW oscillator in noisy environments, the tunable two port SAW
resonator circuit within the oscillator is employed in differential
mode, connected to a differential amplifier circuit to create a
15 differential oscillator. In the absence of any need for ground or
power supply voltage level references, low phase noise/edge jitter
is maintained even in hostile environments while providing
sufficient tune range to track small frequency changes. The
resulting differential mode SAW oscillator is thus well-suited for
use, for instance, in clock recovery within SONET applications.
